

BUCK is involved in development, production and trade of lighting equipment and spare parts. In the business processes, BUCK pays special attention to environment protection.

This is the reason we have established, applied, maintained and constantly improved the system of environmental management, in accordance with the requirements of the standard ISO 14001.

The system of environment management includes all employees and all external suppliers which take part in our business processes and are present on our location.

We are committed to:

- Protection of the environment;
- Fulfillment of our obligations regarding legal and other requirements;
- Constant improvement of the environment management system in order to enhance the performances regarding the environment.

All employees of BUCK doo are committed to take preventive actions regarding pollution and, in such an aim, they:

- Identify all aspects that have or may have an impact on the environment with the aim of environmental pollution prevention;
- Perform their business activities in accordance with relevant laws, regulations and demands of the stakeholders in environment protection;
- Define and conduct the rules of organization not required by law, with the aim of improving the system of environmental protection management;
- Perform trainings for preventive actions in pollution prevention, responsible use of the resources and constant improvement of environment protection systems;
- Save resources and energy, diminish or eliminate the use of dangerous materials and supervise the waste management;
- Consider the opinions and suggestions of all stakeholders and take appropriate measures in order to promote environmental protection and
- Inform business partners and other stakeholders of their own commitment to environmental protection.

Belgrade,
